## Mobilising Domestic Finance To Support NbS

**Domestic finance**  
from economic  
instruments related to  
water use is **essential**

- for implementing River Basin Management Plan Programmes of Measures including Nature-based Solutions
- For encouraging rational use

The **EU4Environment**  
**Water and Data**  
**Programme** is  
conducting tailored  
work in each country

- to better understand the current state of domestic finance mobilisation and support improving domestic finance mobilisation
- This looks very different in each country, depending on national situation and priorities.

## Enhancing the Enabling Environment for Financing Water Security

- Countries also need to create an enabling environment that facilitates and accelerates investments in water security and sustainable development, this includes NbS.
  - We are currently piloting a new OECD scorecard to assess the enabling environment for investing in water security in Armenia, and will then proceed to the other 4 Eastern Partner countries

## Finding cost-effective Nature based Solutions for RBMP

● Examining current **trends** in EU Member States and other countries around **cost-effective NbS deployment in the water sector**

● Identifying where the **cost-effective solutions** might fit in the context of Eastern Partner countries, and potential approaches to **finance** them

● Organising a **workshop** to discuss the **findings and share experience**
